## **DETAILED ACTION**

### ***Response to Amendment***

1. The reply filed April 6, 2007 is acknowledged.
2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### ***Claim Rejections - 35 USC § 112***

3. Claims 35, 40 and 41 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 35, 40 and 41, the preamble of the claim recites an injection nozzle (subcombination) but the body of the claims recite limitations defining spatial relationship between the injection nozzle and the combustion space (combination). It is uncertain whether applicant is claiming a subcombination or a combination.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3752

5. Claims 24, 31, 33, 35, 36, 40, 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hofmann (4,296,887) in view of Beele (6,528,189).

Hofmann discloses an injection nozzle comprising a nozzle body 10 and a heat protecting bushing 20. Hofmann differs from what is being claimed in the first and second coatings.

Beele teaches a turbine component comprising a substrate 1, a first coating 2,3 and a second coating 4. The substrate is of nickel or cobalt-based superalloy (col. 8, lines 35-36). The first coating 2 is formed of an MCrAlY alloy. The second coating 4 is ceramic. The Al in the first coating has a higher thermal conductivity than the nickel substrate. The ceramic has a lower thermal conductivity than the nickel substrate.

It would have been obvious to a person having ordinary skill in the art at the time of the invention to have replaced the protecting bushing of Hofmann with the first coating, second coating, and the substrate material of Beele to provide a thermal barrier prolong life by reducing oxidation of layers (Beele, col. 11, lines 30-40).

Regarding claim 36, Beele discloses an additional substrate material 2 and a first coating 3.

### ***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

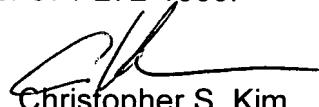

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
